

1. Power Calculation Recursion Variants

- Write a program in C to calculate the power of any number using recursion.
- Test Data :
- Input the base value : 2
Input the value of power : 6
- *Expected Output :*
- The value of 2 to the power of 6 is : 64

2

Base value

6

Value of power

2^6

$2 \times 2 \times 2 \times 2 \times 2 \times 2$
 $= 64$

```
1  #include <stdio.h>
2
3  long int CalcuOfPower(int x,int y)
4  {
5      long int result=1;
6      if(y == 0) return result;
7      result=x*(CalcuOfPower(x,y-1)); //calling the function CalcuOfPower itself recursively
8  }
9  int main()
10 {
11     int bNum,pwr;
12     long int result;
13     printf("\n\n Recursion : Calculate the power of any number :\n");
14     printf("-----\n");
15
16     printf(" Input the base value : ");
17     scanf("%d",&bNum);
18
19     printf(" Input the value of power : ");
20     scanf("%d",&pwr);
21
22     result=CalcuOfPower(bNum,pwr);//called the function CalcuOfPower
23
24     printf(" The value of %d to the power of %d is : %ld\n\n",bNum,pwr,result);
25
26     return 0;
27 }
```

2. GCD Recursion Variants

- Write a program in C to find the GCD (Greatest Common Divisor) of two numbers using recursion.
- Test Data :
- Input 1st number: 10
Input 2nd number: 50
- *Expected Output :*
- The GCD of 10 and 50 is:
- 10

$$GCD(a, b) = \begin{cases} GCD(b, a - b) & \text{if } a > b \\ GCD(b, a) & \text{if } a < b \\ a & \text{if } a = b \end{cases}$$

```
1  #include<stdio.h>
2
3  int findGCD(int num1,int num2);
4  int main()
5  {
6      int num1,num2,gcd;
7      printf("\n\n Recursion : Find GCD of two numbers :\n");
8      printf("-----\n");
9      printf(" Input 1st number: ");
10     scanf("%d",&num1);
11     printf(" Input 2nd number: ");
12     scanf("%d",&num2);
13
14     gcd = findGCD(num1,num2);
15     printf("\n The GCD of %d and %d is: %d\n\n",num1,num2,gcd);
16     return 0;
17 }
18
19 int findGCD(int a,int b)
20 {
21     while(a!=b)
22     {
23         if(a>b)
24             return findGCD(a-b,b);
25         else
26             return findGCD(a,b-a);
27     }
28     return a;
29 }
```

3 . Prime Check Recursion

Variants

- Write a program in C to check if a number is a prime number or not using recursion.
- Test Data :
- Input any positive number : 7
- *Expected Output :*
- The number 7 is a prime number.

A **prime** number is a positive integer with only two factors : itself and one

$2 \overline{) 2}$
1
Prime Number
 $2 = 2 \times 1$
Factors : 1, 2
two factors only

$2 \overline{) 6}$
3 $\overline{) 3}$
1
Not a Prime Number
 $6 = 2 \times 3 \times 1$
Factors : 1, 2, 3
more than two factors

$2 \overline{) 12}$
2 $\overline{) 6}$
3 $\overline{) 3}$
1
Not a Prime Number
 $12 = 2 \times 2 \times 3 \times 1$
Factors : 1, 2, 3, 4, 6, 12
more than two factors

91	92	93	94	95	96	97	98	99	100

```
1  #include<stdio.h>
2
3  int checkForPrime(int);
4  int i;
5
6  int main()
7  {
8
9      int n1,primeNo;
10
11     printf("\n\n Recursion : Check a number is prime number or not :\n");
12     printf("-----\n");
13
14     printf(" Input any positive number : ");
15     scanf("%d",&n1);
16
17     i = n1/2;
18
19     primeNo = checkForPrime(n1);//call the function checkForPrime
20
21     if(primeNo==1)
22         printf(" The number %d is a prime number. \n\n",n1);
23     else
24         printf(" The number %d is not a prime number. \n\n",n1);
25     return 0;
26 }
27
```

```
28 int checkForPrime(int n1)
29 {
30     if(i==1)
31     {
32         return 1;
33     }
34     else if(n1 %i==0)
35     {
36         return 0;
37     }
38     else
39     {
40         i = i -1;
41         checkForPrime(n1); //calling the function checkForPrime itself recursively
42     }
43 }
```

4. Even/Odd Range Recursion Variants

- Write a program in C to print even or odd numbers in a given range using recursion.
- Test Data :
- Input the range to print starting from 1 : 10
- *Expected Output :*
- All even numbers from 1 to 10 are : 2 4 6 8 10
- All odd numbers from 1 to 10 are : 1 3 5 7 9

```
1  #include <stdio.h>
2  void EvenAndOdd(int stVal, int n);
3
4  int main()
5  {
6      int n;
7      printf("\n\n Recursion : Print even or odd numbers in a given range :\n");
8      printf("-----\n");
9
10     printf(" Input the range to print starting from 1 : ");
11     scanf("%d", &n);
12
13     printf("\n All even numbers from 1 to %d are : ", n);
14     EvenAndOdd(2, n); //call the function EvenAndOdd for even numbers
15
16     printf("\n\n All odd numbers from 1 to %d are : ", n);
17     EvenAndOdd(1, n); // call the function EvenAndOdd for odd numbers
18     printf("\n\n");
19
20     return 0;
21 }
22 void EvenAndOdd(int stVal, int n)
23 {
24     if(stVal > n)
25         return;
26     printf("%d ", stVal);
27     EvenAndOdd(stVal+2, n); //calling the function EvenAndOdd itself recursively
28 }
```
